JANUARY corresponds to July in Great Britain. It is usually one of the hottest months of the year, and marked by frequent thunderstorms. The weather in January, 1883, was much cooler than usual, the mean shade temperature, 76·2°, being 2·2° under the average of the month for the last ten years, and 2·8° under the average of the previous three years. The highest reading in shade, 92·0°, was on the 22nd; the lowest on grass, 61·5°, was on the morning of the 17th. The mean barometric reading, 29·918° inches, was 0·006 inches under the average of the month for the last ten years; the highest reading, 30·072 inches, was at 9 a.m. on the 14th, and the lowest, 29·697, at 3 p.m. on the 22nd. Rain fell on 19 days; the total fall, 8·29 inches, being 2·68 inches over the average of the month for the previous ten years. The maximum fall during 24 hours, 1·70 inches, was on the 6th.

GARDEN, ORCHARD, AND FARM CALENDAR FOR JANUARY.

Written expressly for Slater's Almanac by Albert John Hockings.

GARDEN AND ORCHARD.—Dig deeply all unoccupied beds, turning in all such garden refuse as will add to the fertility of the soil by its decay. Heavy soil is much improved in texture when thrown up roughly and exposed to the influence of the summer's sun, being rendered more friable. Fork between the rows of vegetables when the soil has become hard after heavy showers. Water vegetables freely in dry weather, giving occasional dressings of liquid manure. In favourable weather sow French beans, brocoli, cabbage, carrot, cauliflower, celery, mustard, cress, lettuce, endive, okra, peas, parsnip, parsley, radish, salsafy, scorzonera, prickly spinach, turnips, Brussels sprouts, and a few cucumber, vegetable marrow, and melon seeds, for late crop. Plant out cauliflowers, cabbages, etc., laying a leaf over each plant to protect it from the sun for a day or two. Gather herbs for drying, also onions, garlic, and eschalots, as the tops die down. Peach, apple, and other trees should be formed during summer by disbudding with the finger and thumb when the shoots are ill placed, and by nipping off the ends of those which are too long or over vigorous. Vines should be tied as they grow to protect them from injury by high winds, and in doing this be careful to arrange the foliage, so as to shelter the fruit from the direct rays of the sun. Gather grapes, peaches, and apples, as they ripen. Vigorous shoots of the Isabella grapes may still be pruned to produce a second crop. Vines layered now are likely to make good roots before winter. Cuttings of any valuable new sort which it is wished to multiply quickly, should be put in during this month, in favourable weather. Carefully remove suckers from vines and fruit trees.

FIELD.—Destroy weeds before they seed; break up land in preparation for future crops; sow Cape barley, rye, and oats for green fodder, and maize for a late crop. Keep growing crops clean.

FEBRUARY corresponds to August in Great Britain ; the weather is generally excessively hot and sultry with a humid atmosphere. In February, 1883, the weather was about as usual, the mean shade temperature, 77·3°, being 0·5° over the average of the month for the previous ten years, and 0·7° over the previous three years. The highest reading in shade, 97·0°, was on the 19th ; the lowest on grass, was 56·0°, on the 7th. The mean barometric reading, 29·805 inches, was 0·111 inches under the average of the month for the last ten years ; the highest, 30·014 inches, was at 9 a.m. on the 25th, and the lowest, 29·597 inches, at 3 p.m. on the 4th. Rain fell on 16 days ; the total fall, 4·63 inches, being 2·89 inches under the average of the previous ten years. The greatest fall in 24 hours, 1·62 inches, was on the 21st. The total rainfall for the year 1883, up to February 28th, was 12·92 inches, on 35 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR FEBRUARY

GARDEN AND ORCHARD.—This should be an active month. Dig roughly all unoccupied beds which have been previously trenched, adding well decomposed manure. Transplant cabbages, Brussels sprouts, cauliflowers, celery, etc. Sow French beans, beet, Brussels sprouts, carrot, cauliflower, celery, mustard, cress, lettuce, radish, prickly spinach, endive, onion, peas, parsnip, and turnip. Plant out strawberries in ground previously prepared by being trenched and thoroughly manured. Mulch the melon and cucumber holes with a dressing of long stable manure ; form the surface between the holes so as to catch water during thunder showers. In very dry weather, when the plants appear to suffer, give ten to twenty gallons of water in the evening to each hole, so that they may be thoroughly soaked, applying the water so that it may get into the soil where the roots are. Gather seeds as they ripen. Cucumbers, melons, French beans, etc., should be gone over daily, and gathered as soon as they are ready, whether they are required or not ; for if left on to perfect their seeds the plants cease to be productive. The fruit should be thinned from Hocking's canvade and greening apples, and the branches carefully propped, lest the trees be broken by its weight. Finish budding trees which are intended to stand over until spring. Collect leaf mould for use when planting fruit trees during the approaching winter. Loosen ties of budded trees. Tie up loose shoots of vines, extending them out to the sun ; if the points are gathered up to a stake, see that the foliage is not bruised or injured.

FIELD.—Continue to prepare land, ploughing it deeply. Lucerne may be sown in clean, well-ploughed deep soil. Vetches or tares, Cape barley and sorghum should be sown for green food for stock. In sheltered and warm positions, 90 day maize may be sown. Early potatoes may be planted whole. Sulphate of Lime or "Superphosphate" applied to the soil greatly increases the health and productiveness of potatoes. Keep the land clean, and hill up maize.

MARCH corresponds to September in Great Britain, and begins to show a pleasant decrease in temperature. In March, 1883, the weather was cooler than usual, the mean shade temperature, 75·0°, being 0·6° under the average of the month for the previous ten years, and 1·2° under the previous three years. The highest reading in shade, 93·0°, was on the 12th; the lowest on grass, 56·0°, was on the morning of the 5th. The mean barometric readings, were ·041 inches, over the average of the month; the highest, 30·252 inches, was at 9 a.m. on the 26th, and the lowest, 29·750 inches, at 3 p.m. on the 11th. Rain fell on 15 days; the total fall, 2·35 inches, being 2·26 inches under the average of the month for ten years, and 0·91 inches under the previous three years. The greatest fall in 24 hours, 0·67 inches, was on the 1st. The total amount of rain that fell in the year 1883, up to March 31st, was 15·27 inches, on 50 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR MARCH.

GARDEN AND ORCHARD.—If previous instructions have been followed, the seed beds will be full of young plants, and there will be sufficient land well dug and manured ready to receive them. Plant out cabbages, cauliflowers, Brussels sprouts, celery, etc., in favourable weather, that is just before rain, choosing the largest and finest plants. Keep the beds free of weeds by frequent and deep hoeing. Give asparagus beds a dressing of salt. Transplant eschalots. Sow English beans, French beans, beet, carrot, mustard, and cress, celery, lettuce, endive, leek, onion, peas, parsnip, radish, prickly spinach, turnip, couve tronchuda, savoys, etc. Make note of fruit trees, or vines that have been sickly or unproductive during the season, so that they may be manured, syringed, scrubbed, pruned, or grubbed out as the case may demand. An unprofitable, unsightly, or inferior tree should not be allowed to cumber the ground. No crops should be grown near fruit trees. Orange trees are often killed by digging about them; their roots being principally on the surface. All land intended to be planted with fruit trees during the approaching season should be trenched and manured this month, if not already done. All stiff or retentive soils should be carefully drained six inches deeper than they are trenched, regardless of the inclination of the surface. It should be remembered that the roots of the trees will be *under* the surface where the water will be retained, unless drainage be provided. Orange trees with the shoots in a state of rest may be transplanted this month.

FIELD.—Sow lucerne, clover, rye grass, prairie grass, oats, barley, wheat, vetches or tares, and sorghum. Sow main crops of potatoes. Hoe early potatoes; gather maize as it ripens; cut tobacco leaves as they arrive at maturity. Sow mangold and Swede turnips for winter food for stock.

APRIL corresponds to October in Great Britain; cool weather is now setting in and nights are frequently chilly. In April, 1883, the weather was cooler than usual, the mean shade temperature, 70·2°, being 1·0° under the average of the month for the previous ten years, and 1·3° under the previous three years. The highest reading in shade, 87·0°, was on the 6th, the lowest on grass, 46·0°, was on the morning of the 25th. The highest barometric reading, 30·277, was at 9 a.m. on the 14th, and the lowest, 29·852 inches, at 3 p.m. on the 22nd. The mean barometric reading, 30·079, was 0·004 inches above the average of the month for the previous ten years. Rain fell on 12 days; the total fall, 3·40 inches, being 0·89 inches under the average of the month for the previous ten years, and 2·50 inches under the previous three years. The greatest fall in 24 hours, 1·47 inches, was on the 24th. The total amount of rain which fell in the year 1883, up to April 30th, was 18·67 inches, on 62 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR APRIL.

GARDEN AND ORCHARD.—Keep down weeds by continual hoeing. Thin out plants that are overcrowded. Divide and plant out pot herbs, giving water if requisite, until they are established. Plant out cabbages, cauliflowers, etc., in favourable weather. Sow English beans, mustard, and cress, lettuce, endive, leek, onions, peas, radish, etc., for succession. Sow hardy annual flower seeds. Evergreen shrubs, roses, and bulbs, may be planted. Where practicable the transplanting of fruit trees should now be proceeded with; and, if done with care, with as much earth as possible round the roots, they will soon emit new roots, and be established in their positions before the final fall of the leaf. This applies specially to evergreen fruit trees, such as lemons, oranges, dates, mangoes, loquats, olives, tamarinds, etc. In transplanting take care that a sufficiently large hole is dug to allow of the roots having ample room; if any of the roots have been bruised or broken in the moving, let the damaged portions be cleanly cut off with a sharp knife; do not set the transplanted shrub or tree any lower in the new ground than in its original place. For some days it is well to shade it, either by matting on sticks or any other contrivance that may answer the desired purpose, taking care that the wind does not blow it down. Water should also be freely applied till the tree has settled itself in its new position. Prop up bananas which have heavy bunches of fruit, as they are apt to be blown down by the winds now prevailing.

FIELD.—Sow vetches, lucerne, wheat, barley, oats, mangold, and Swede turnips. Gather sorghum and imphee as they ripen, or the birds will either consume or scatter it. Plough land for future crops. Cut and house tobacco as soon as it arrives at maturity.

MAY corresponds to November in Great Britain. The Queensland winter may now be considered as having begun. Weather generally cool and enjoyable. In May, 1883, the weather was a little cooler than usual, the mean shade temperature, 65·1°, being 0·6° under the average of the month for the previous ten years, and 1·3° under the previous three years. The highest reading in shade, 80·0°, was on the 1st ; the lowest on grass, 38·0°, was on the morning of the 31st. The highest barometric reading, 30·184, was at 9 a.m. on the 11th, and the lowest, 29·788 inches, at 3 p.m. on the 14th. The mean barometric reading, 29·956 inches, was 0·111 under the average of the month. Rain fell on 11 days ; the total fall 4·21 inches, being 0·18 inches over the average of the month for the previous ten years, and 1·42 inches over the previous three years. The greatest fall in 24 hours, 2·95 inches, was on the 14th. The total amount of rain which fell in the year 1883, up to May 31st, was 22·88 inches, on 73 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR MAY.

GARDEN AND ORCHARD.—Transplant onions, garlic, eschalots, rhubarb, etc. Sow lettuce, endive, leek, onion, peas, radish, mustard, and cress, cabbage, turnip, carrot, parsley, and pot herbs. Dig beds intended for asparagus. In making beds choose the best soil which the garden affords, the ground must be dug deep and most plentifully manured. Rhubarb may now be planted in deeply-dug, well manured beds. The onion crop sometimes suffers severely from the ravages of a green grub which is in some soils in large numbers. They come out at night and cut off the young onions level with the surface as if cut off with a knife. Land intended for this crop should be previously examined for these pests, and if possible receive a dressing of soot, which would not only prove very obnoxious to the grubs, but would be a valuable manure for the onions.

Transplant fruit trees and evergreen shrubs. Do not plant too deep; put fine mould among the roots, making it firm, using water copiously unless the soil is wet. Transplant strawberries into leaf mould or well-decayed cow dung, giving them abundance of water during their growing season. In cold situations, protect tropical fruit trees, and throw a little hay over the the pine apple plants, with the same object.

FIELD.—Sow vetches, barley, oats, rye, wheat, also Lucerne, and other grasses. Cut tobacco. Earth up potatoes. Rye, as green fodder, is much relished by cattle and horses, and if not allowed to go to seed, it will make a good sward for grazing over, being green and succulent during winter and early spring.

JUNE corresponds to December in Great Britain ; weather generally cool, with fine clear nights and sometimes heavy dewfall. In June, 1883, the weather was a little warmer than usual, the mean shade temperature, 62·2°, being 1·1° over the average of the month for the previous ten years, and 2·5° over the last three years. The highest reading in shade, 81·0°, was on the 23rd ; the lowest on grass, 39·0 was on the morning of the 5th. The highest barometric reading, 30·426 inches, was at 9 a.m. on the 12th, and the lowest, 29·901 inches, at 3 p.m. on the 4th. The mean barometric reading, 30·232 inches, was 0·129 inches over the average of the last ten years. Rain fell on 4 days; the total fall, 0·30 inches, being 2·63 inches under the average of the month for the last ten years, and 1·62 inches under the last three years. The greatest fall in 24 hours, 0·16 inches, was on the 10th. The total amount of rain which fell in the year 1883, up to June 30th, was 23·18 inches, on 77 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR JUNE.

GARDEN AND ORCHARD.—No colonial grown cabbage seed should be sown until after September, as it runs to seed when the plants are ready to heart. The English seed does not run until the second season, and will therefore heart perfectly. Transplant horseradish, eschalots, rhubarb, strawberries, seakale, etc. Dig over old rhubarb, seakale, and asparagus beds, giving them plenty of good rotten manure. Sow brocoli, Brussels sprouts, cabbage, red cabbage, cauliflower, lettuce, endive, peas, English beans, radish, etc. To grow water cresses, dig a trench, as if for celery ; turn in abundance of well-decayed manure at the bottom, sifting some fine soil over it, and dibble the cuttings in at a foot apart, give the whole a good watering. Orange trees which are not in good health should have their trunks and large branches scrubbed with a scrubbing brush, and washed clean before the spring growth commences. The surface soil, to the full circuit of the foliage of the tree should have a dressing of stable manure. Apple trees affected with American blight should have the earth removed from the roots near the surface, and they should be painted with castor oil, or strong Gishurst Compound. Some sorts of apple are "blight proof," and these should have the preference when planting, as far as practicable ; and the others should be worked upon stocks which are blight proof. Transplanting fruit trees and vines should be proceeded with vigorously. Prune fruit trees and vines, protect bunches of bananas in cold situations, by covering each with a light bag open at the bottom.

FIELD.—The arrowroot will fill out rapidly as the cold checks the growth at the top. Sow oats, lucerne, rye grass, vetches, prairie grass, etc. Prepare land in warm situations for sowing with maize and planting with potatoes next month. Early sown wheat often escapes rust and other ills which affect later crops.

JULY corresponds to January in Great Britain, and like it, is the coldest month of the year, though the sun has considerable power in the middle of the day. In July, 1883, the weather was warmer than usual, the mean shade temperature, 60·1°, being 0·7° over the average of the month for the previous ten years, and 0·5° over the previous three years. The highest reading in the shade, 79·0°, was on the 3rd; the lowest on grass, 35·5°, was on the morning of the 30th. The mean barometric reading, 30·127 inches, was 0·029 inches under the average of the month; the highest, 30·380 was at 9 a.m. on the 1st, and the lowest, 29·867 inches, at 3 p.m. on the 22nd. Rain fell on 5 days; the total fall, 0·69 inches, being 2·05 inches under the average of the month for the previous ten years, and 0·61 inches under the previous three years. The greatest fall in 24 hours, 0·43 inches, was on the 22nd. The total amount of rainfall during the year 1883 up to 31st July, was 23·87 inches, on 82 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR JULY.

GARDEN AND ORCHARD.—Plant asparagus beds. Sow cauliflowers, carrot, beans, lettuce, endive, radish, spinach, etc. On sowing seeds after rain, see that the land is in a friable condition. If too wet it will clog and bind together. The soil should never be walked over or disturbed by sowing or digging the crops until it is sufficiently dry to be friable. Plant out onions and eschalots. Three or four days after planting, rake the soil between the rows in dry weather, it will kill thousands of young weeds. Finish pruning fruit trees and vines. Plant out fruit trees and vines, and cuttings of grape vines, and such trees as are propagated in that manner. Graft young orange trees. The Seville orange forms the best stock upon which to graft approved sorts. Prepare land hitherto neglected, that all planting may be finished by the end of next month if possible. Eradicate docks, and give a dressing of salt to the vines and fruit trees, lightly forking in well-decayed manure where necesssary.

FIELD.—Finish planting lucerne. Sow oats, vetches, etc. Prepare land for potatoes, maize, tobacco, sugar-cane, carrots, mangold wurzel, chicory, etc. Plant potatoes and maize. Take up and prepare arrowroot as the crop matures.

HINTS.—Never grow the same crops, nor crops of the same family twice on the same spot, without an intervening crop of a different nature.

Never transplant shrubs, or trees in a growing state. However carefully it may be done the check is dangerous and often fatal.

Let the drainage of the ground be your first care. It is impossible to succeed to any extent with vegetables or flowers, when the water is stagnant in the soil.

AUGUST corresponds to February in Great Britain, and is for the most part cold, but towards the end a rise in the temperature may be noticed. In August, 1883, the weather was warmer than usual during the month, the mean shade temperature, 64·1°, being 1·5° over the average of this month for the previous ten years, and 1·3° over the previous three years. The highest reading in shade, 83·0°, was on the 18th; the lowest on grass, 34·0°, was on the 15th. The highest barometric reading, 30·344 inches, was at 9 a.m. on the 1st, and the lowest, 22·895 inches, at 3 p.m. on the 31st. The mean barometric reading, 30·161 inches, was ·027 inches higher than the average of the month. Rain fell on 4 days; the total fall, 1·37 inches, being 1·03 inches under the average of the month for the previous ten years. The maximum fall during 24 hours, 1·29 inches, was on the 22nd. The total amount of rainfall during the year 1883, up to 31st August, was 25·24 inches, on 86 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR AUGUST.

GARDEN AND ORCHARD.—Peas sown this month should have a cool aspect. A dressing of salt at this season at the rate of 7 or 8 lbs. to the perch would be a great advantage to most soils, tending to sweeten the land, destroy insects, discourage weeds, fungus, and mildew, and to retain moisture. Sow beet, brocoli, melons, Brussels sprouts, cucumber, lettuce, endive, okra, parsley, pumpkins, vegetable marrow, radish, rhubarb, round spinach, tomato, tobacco, carrot (large sowing), leek, cabbage, cauliflower, chervil, turnip, parsnip, etc. Plant out horseradish, rhubarb roots, herbs, sea-kale, asparagus, Jerusalem artichokes, ginger, etc. Destroy weeds while young, and syringe with Gishurst Compound plants which are attacked with aphis. Endeavour to finish planting fruit trees, vines, and other plants, as the sun will be gaining power, which will increase the labour and risk. Young orange trees which show too much bloom should have it removed, and receive a little liquid manure to promote foliage. If any of the orange trees are affected with the aphis, they should be well syringed with a solution of Gishurst Compound, or of water in which a small quantity of soft soap and sulphur have been dissolved. A small quantity of Kerosine in a bucket of warm water, has been found very effectual against scale, blight, etc. It should be well mixed, syringed on and kept from the roots of the trees. Graft China pears, as they break very early. Any work left over from last month should be completed. Keep the land clean and the surface open to receive the dews and showers. Earth nuts are a profitable crop in light friable soil, especially near the sea shore, and in soil having lime in it.

FIELD.—Keep the crops clean. Plant potatoes, maize, rice, yams, arrowroot, etc. Hoe up potatoes. Sow sorghum, imphee, teosinte, and tobacco. Silk worms will now require constant attention, feeding them frequently with young and tender leaves.

SEPTEMBER corresponds to March in Great Britain. In September, 1883, the weather was cooler than usual, the mean shade temperature, 66·9, being 0·6° under the average of the month for the previous ten years, and 1·4° under the previous three years. The highest reading in shade 85°, was on the 16th ; the lowest on grass, 37·0°, was on the morning of the 8th. The highest barometric reading, 30·312 in., was at 9 a.m. on the 30th, and the lowest, 29·654 in., at 3 p.m. on the 3rd. The mean barometric reading, 30·063 in., was ·017 in. over the average of the month. Rain fell on five days; the total fall, 2·08 in., being 0·12 in., over the average of the month for the previous ten years. The greatest fall in twenty-four hours, 0·88 in., was on the 28th. The total rainfall for the year 1883, to September 30th, was 27·32 in., on 91 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR SEPTEMBER.

GARDEN AND ORCHARD.—As summer grass and other summer weeds now make their appearance, it is important to keep the land thoroughly clean. Take every opportunity to collect manure of all kinds, to be thrown into well-puddled tanks to rot down for use in autumn and winter. Valuable lessons may be learned from the Belgian farmers upon this important but much-neglected subject. The Japanese are also vastly superior to us in the knowledge and practice of manuring. During the summer months in this colony manure should generally be applied in the liquid form. See that crops are not planted too closely so as to be crowded. Trench vacant land, in preparation for future crops, leaving the surface rough, to mellow by exposure. Sow English and French beans, parsley, beet, capsicum, chili, cardoons, mustard, cress, lettuce, endive, eggplant, okra, Cape gooseberry, radish, rhubarb, round spinach, tomato, tobacco, cucumber, melons, pumpkins, vegetable marrow, carrots, parsnips, etc. Transplant cabbages, cauliflowers, eschalots, etc. Plant Jerusalem artichokes, rhubarb roots, herbs, seakale, asparagus, ginger, earth nuts, etc. Sow rosella. In dry weather give recently planted fruit trees sufficient water at the roots, leaving the surface to be kept damp by a mulching of stable litter. Destroy all caterpillars that infest the vines about this time. Attend promptly to the disbudding of grape vines; removing all suckers and superfluous shoots as soon as they appear. Tie up fruiting shoots to the trellises as they advance. Graft apples and pears.

FIELD.—Keep the land clean and loose among growing crops. Plant arrowroot, yams, sweet potatoes, tobacco, etc. Sow imphee, sorghum, and maize for green fodder. Many of the new sorts of sugar-cane which have been under trial have proved to be hardy and productive. Among these, the *Creole* cane stands high in consequence of its present reputation for heavy yields of excellent sugar, and its healthiness.

OCTOBER corresponds to April in Great Britain; the weather begins to be unpleasantly hot, with occasional thunder and sometimes heavy hail storms. In October, 1882, the weather was slightly warmer than usual, the mean shade temperature, 71·6°, being 0·2° over the average of the month for the previous ten years, and 1·6° over the average of the previous three years. The highest reading, in shade, 94·0, was on the 21st; the lowest on grass, 52·0°, was on the morning of the 7th. The mean barometric reading, 29·992 inches, was ·069 inches under the average of the month; the highest reading, 30·263 inches, was at 9 a.m. on the 4th, and the lowest, 29·564 inches, at 3 p.m. on the 23rd. Rain (which varies very much in quantity during the month) fell on 19 days; the total fall, 9·99 inches, being 7·27 inches over the average of the month for the previous ten years. The greatest fall during 24 hours, 3·08 inches, was on the 19th. The total rainfall for the year 1882, to October 31st, was 33·02 inches, on 98 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR OCTOBER.

GARDEN AND ORCHARD.—Keep the crops clean, mulch them and give water where necessary. Sow parsley, English beans, French beans, mustard, cress, lettuce, endive, okra, radish, round spinach, beet, vegetable marrow, melon, carrot, cucumber, tomato, rosella, etc. Sow St. John's Day cabbage, which is the best for summer culture, being early, hardy, of fair quality, and notwithstanding heat, dry weather, and aphis, better than any other. Convert all waste vegetables into manure in some form: either to feed pigs, or throw them into the tank to rot, or burn them out of the way, and use the ashes. Thin out the fruit on China peaches of all kinds, and carefully eradicate the suckers which spring from the root, cutting them close to their origin neatly with a knife. Remove also the strong watery shoots which fill up the inside of the tree, so as to admit sun and air, and leave the whole strength of the plant to mature the crop. Support the branches of the trees, as the fruit swells. Examine the orange trees and if either thrip, smut, coccus, or fungus appear on the stems, scrub them as recommmended in June. Tie up the vines as they grow, being careful not to injure the foliage (which performs the function of both lungs and stomach for the plant), and see that the fruit is sufficiently protected from the direct rays of the sun. It is a good plan to secure fine fruit, to thin out with a pair of sharp pointed scissors some of the grapes in overcrowded bunches. Sulphur the vines upon the first appearance of Oidium. Plant bananas and pine apples. Trench and drain the land intended for planting with fruit trees in the winter; and if well cultivated, one crop taken from it would improve its texture.

FIELD.—Clean and earth up growing crops. Plant yams, earth nuts, coffee, arrowroot, ginger, sweet potatoes, and sugar-cane. Sow sorghum, imphee, etc.

NOVEMBER corresponds to May in Great Britain. Summer has now fairly set in. In November, 1882, the weather was cooler than usual, the mean shade temperature, 73·7, being 2·4° under the average of the month for the previous ten years, and 2·7° under the average of the previous three years. The highest reading in shade, 91·0°, was on the 1st; the lowest on grass, 51·5°, was on the morning of the 3rd. The mean barometric reading, 30·114 inches, was ·176 inches above the average of the month; the highest reading, 30·297 inches, was at 9 p.m. on the 8th, and the lowest, 29·840 inches, at 3 p.m. on the 1st. Rain (which varies much in quantity during this month) fell on 19 days; the total fall, 9·99 inches, being 6·22 inches above the average of the month for the previous ten years. The greatest fall during 24 hours, 3·08 inches, was on the 19th. The total rainfall for the year 1882, to November 30th, was 43·02 inches, on 117 days.

GARDEN, ORCHARD, AND FARM CALENDAR FOR NOVEMBER.

GARDEN AND ORCHARD.—At this season the beds should have the ridges laid across the hills in sloping ground, so as to catch the showers. Thin cucumber and melon beds where overcrowded, and loosen the soil if it is bound. Fasten down the shoots with wooden pegs so as to cover the ground evenly; it steadies the plants and protects them from much injury from wind during storms. Sow French beans, melons, brocoli, Brussels sprouts, mustard, cress, cucumber, lettuce, endive, celery, okra, radish, rosella, pumpkins, etc. Thin the early peaches as soon as the fruit is fit for cooking. Mulch the trees a considerable distance around the stems. Clear out all superfluous shoots to throw the whole strength of the plant into the crop; not injuring or removing any of the foliage unnecessarily. Remove suckers from grape vines, stop straggling branches, and rub off weak, ill-placed shoots. Vigorous old Isabella vines upon having the ripest of the present season's rods pruned during this and next month, will give a second crop of fruit. The cuttings also, if planted, will form strong roots before the planting season. Apricots and China peaches should be budded. Plant banana and pine apple suckers. Trench land intended for planting next season, to give it the sweetening influence of the summer's sun. Where pine apples are largely grown, it will pay to thin out the suckers early this month, as it not only causes the summer crop of fruit to be larger, but the young suckers which appear on the pruned shoots will produce winter pine apples, which sell at a high price. The most convenient implement for thinning out, is the large strong-handled South Sea Island knife, kept sharp at both sides of the point, and used with a downward thrust.

FIELD.—Keep the land clean with the horse hoe. Stop tobacco plants as required, to direct the sap into the leaves intended for the crop, and remove caterpillars. In making oaten hay, cut the crop when well in ear, but before the seed is near mature; the whole plant is then in the most nourishing condition.

GARDEN, ORCHARD, AND FARM CALENDAR FOR DECEMBER.

GARDEN AND ORCHARD.—The seeds should be protected during the summer months from the direct rays of the sun by some light cover a foot or two above the ground. Thin calico or light open brushwood, not too dense, would be suitable. If the seed beds were well watered with liquid manure, *so as to thoroughly soak the soil*, a few hours *before* sowing the seed, and the latter was covered by sifting over it some stable litter, there would not be so many failures even in summer. Sow cabbage, cauliflower, French beans, mustard, cress, lettuce, endive, okra, radish, etc. All vacant land should be well manured and dug two spits deep. Manure and dig as the crop comes off, and the land will be ready for planting after the first shower. Place straw under the peach trees upon which the fruit may fall without bruising. Straggling wood shoots should be stopped, to keep the trees in form, and prevent the weaker branches being robbed of their share of nourishment. Trench and manure land intended for planting with fruit trees or vines. On the slightest appearance of Oidium among the vines or American blight among the apples, dress them as previously directed. Those who object to the use of sulphur and lime in their dry state may boil one pound of sulphur and one pound of lime in a gallon of water for half-an-hour; one pint of this, when strained, may be mixed with ten gallons of water, and applied to the affected vines with a syringe.

FIELD.—Keep crops clean. Dig potatoes as soon as ripe, as they will not keep in the soil; and have them collected as they are dug, or the sun will cause them to rot. Plant maize.

BONUS YEAR---1883-84.

All Policies effected before 30th June, 1884, will participate in the DIVISION of PROFITS to be then made.

At the last investigation, viz.: 30th June, 1879, a surplus of £11,000 was shown, out of funds amounting to £112,746, by an absolutely pure Premium Valuation.

At the close of the present Quinquennium it may be confidently expected the

INVESTED FUNDS WILL EXCEED £350,000.

The Association's Policies are Indefeasible from date of issue, and Non-forfeitable while Surrender Value lasts. Its Conservative Management secures business at a lower rate of expenditure than any other Mutual Life Office established in Australia within the last 30 years; and careful selection of lives has resulted in a remarkable reduction of its yearly mortality experience, as regards number, amount, and percentage on the existing Assurances.

Hapsburg IRON-FRAMED Pianos!

The Sydney *Evening News* of July 18th writes as follows:—

THE LATE CHARLES PACKER.

CHARLES SANDYS PACKER, who died on Friday last at his residence, Point Piper-road, Wollahra, at the advanced age of 73 years, was, as is well known, ONE OF THE MOST ACCOMPLISHED MUSICIANS AUSTRALIA EVER HAD. The deceased was born in Reading, Berkshire, England, in 1810, and at an early age he was placed by his father, who was a musician, at the Royal Academy of Music. Here great success attended his efforts, and he carried off many of the best prizes awarded for composition, pianoforte playing, and singing. (For composition his masters were Dr. Crotch, Regius Professor at Oxford; Mozart's pupil, Attwood; Bochsa, the great orchestral master; and Weber, who is celebrated for his compositions. For singing his masters were Crivelli and Velluti. When a youth the deceased composed an opera for the opening of the new Royal Lyceum Opera House, and his literary coadjutor was Mary Russell Mitford, the authoress of "Our Village."

HIS VOLUNTARY VERDICT on the HAPSBURG was:—

Sydney, 7th March, 1883.

"I have tested the HAPSBURG PIANOS, imported by Messrs. BEALE & COMPANY, in ALL the VARIOUS GRADES, and am extremely pleased with the SWEETNESS, FULNESS, and POWER of the instruments. The TONE and FINISH are ALL THAT COULD BE DESIRED. The proper balancing of bass with treble is strictly adhered to. Generally I consider them UNSURPASSED by any INSTRUMENT hitherto introduced.

"(Signed) CHARLES PACKER, Royal Academician,

'Composer of the Oratorio 'Crown of Thorns,' &c,"

WHO IS ALICE CHARBONNET-KELLERMAN, FAMILIARLY KNOWN to the music-loving public of Australia as "CHARBONNET?"

The PRESS of VICTORIA and NEW SOUTH WALES refer to her as ONE OF THE MOST BRILLIANT PIANISTES WHO HAS EVER VISITED OUR SHORES. Her career in connection with the CONSERVATOIRE OF PARIS was one unchecked triumph, and spread her fame far and wide through these colonies before she favoured them with a visit.

After using FOUR OF OUR HAPSBURG PIANOS AT ONE OF HER GREAT CONCERTS in Sydney, she VOLUNTARILY SOUNDED THEIR PRAISES in the following letters:—

"*Ayantsoumis les PIANOS HAPSBURG, de Messieurs Beale et Compagnie aux PLUS STRICTES EPREUVES, je déclare avoir été aussi charmée que surprise de la DOUCEUR EXQUISE DE LEUR TOUCHER, unie à une ampleur et une SONORITE REMARQUABLES*

"*Je les recommande en toute cincérité.*

"*ALICE CHARBONNET-KELLERMANN.*

"*Sydney, 20 Juin, 1883.*" "*Der Conservatoire de Paris.*

CERTIFICATE.

"I have subjected Messrs. Beale & Co.'s HAPSBURG PIANOS to the severest tests, and am greatly surprised and delighted at their MARVELLOUS SWEETNESS and POWER. I cordially recommend them.

"(Signed) ALICE CHARBONNET-KELLERMAN,

"Sydney, June 20, 1883." "Of the Conservatoire of Paris.

AGAIN ANOTHER VERDICT. MONTAGUE-TURNER OPERA COMPANY.

"THEATRE ROYAL, July 29th, 1883.

To Messrs. Beale & Company, Limited.

"Gentlemen,—I congratulate you on your successful introduction of the HAPSBURG Iron-framed Pianofortes.

"I have used several of them in different towns, and have INVARIABLY FOUND THEM ALL THAT COULD BE DESIRED in a FIRST-CLASS PIANOFORTE.

"Being EXTREMELY POWERFUL, SWEET, and CLEAR in Tone, the TOUCH is elastic and sympathetic; and although tuned above concert pitch, (a test which few pianos will stand), I CAN ALWAYS DEPEND UPON the HAPSBURG PIANOS remaining well in tune.

"I can STRONGLY RECOMMEND the Hapsburg Pianos to anyone desiring a FIRST-CLASS INSTRUMENT at a VERY REASONABLE PRICE.

"I remain, Gentlemen, yours, &c.

"CONDUCTOR MONTAGUE-TURNER OPERA COMPANY."

REGISTRATION OF BIRTHS, MARRIAGES, AND DEATHS.

Every Birth must be registered within sixty days, and every death within thirty days next thereafter respectively; and neglect of this regulation renders the parties, whose duty it is to register, liable to a fine not exceeding £10. If sixty days have elapsed from the date of birth, the law requires the parent, or other person making the application to register such birth, to pay a fee of two shillings and sixpence, and to make a solemn declaration of the facts before a Justice of the Peace, prior to the registration. If possible, in all cases, the father or mother ought to sign as informant. If unable to write, let a mark be made. No birth can be registered after three years have elapsed from the date thereof; but a record will be made in the Registrar-General's office if information be supplied respecting such a birth.

Every minister who has celebrated a Marriage must, within one month thereafter, transmit (in accordance with the Act 28 Victoria No 15) the original certificate to the Registrar of the District, and every minister who fails to transmit the certificate to the District Registrar, is liable to a fine of NOT LESS THAN £10 and not exceeding £50. Marriages must be solemnised between the hours of 8 a.m. and 8 p.m. Persons under age must produce the written authority of parents or guardians, signed by them in the presence of a Justice of the Peace, Registered Minister, or District Registrar, or the marriage cannot take place.

In every case of Burial, the minister or person officiating at any religious service at such burial ought to receive from the undertaker or person having charge of the funeral, a certificate from the District Registrar, certifying the registration of the death, unless in the case of inquest, when a certificate from the Coroner or Magistrate holding the inquest will be sufficient; and if any dead body shall be buried without such certificate, the person who may bury the same, or perform any funeral or religious service for the burial, or who shall in any way dispose of the body, shall forthwith give notice of the facts to the District Registrar. Undertakers are bound under a penalty not exceeding £10 to lodge with the District Registrar, IMMEDIATELY after the burial, a certificate of such burial signed by themselves, and COUNTERSIGNED BY TWO WITNESSES.

DIRECTIONS FOR MAKING A WILL.

The witnesses, *who must not be interested in the will*, must strictly comply with every particular required by the attestation clause, at the end of which clause they must sign their names. A witness is not bound to know the contents of the Will.

FORM OF A WILL.

This is the last Will and Testament of me made this day of One thousand eight hundred and eighty as follows. I give, devise, and bequeath all my messuages, lands, tenements, and hereditaments, and all my household furniture, ready money, money secured by life assurance, goods and chattles, and all other my real and personal estate and effects whatsoever, unto my dear wife [or other person as may be] her heirs, executors, administrators, and assigns, to and for her and their own absolute use and benefit, according to the nature and quality thereof respectively, subject only to the payment of my debts, funeral and testamentary expenses and the charges of proving and registering this my Will. And I appoint my said wife executor of this my Will, and hereby revoke all other Wills.

In witness whereof I have hereunto set my hand the day and year above written.

Signed, published, and acknowledged by the said as and for his last Will and Testament in the presence of us, who in his presence and at his request, and in the presence of each other, have subscribed our names as witnesses.

A CODICIL

To a Will is to be made with the same regulations as the Will itself, and may be written thus:—This is a Codicil to my last Will and Testament, bearing date the day of 188 and which I direct to be taken as part thereof. I give, devise, and bequeath, &c. As witness my hand this day of 188 .

NOTE.—Obliterations and alterations of any sort in a Will ought, if possible, to be avoided; when of necessity made, they must be signed by the Testator and Witnesses on the margin, or as near to the alteration as possible.

Marriage after making a Will renders the Will void.

If a witness is interested in the Will the claim to such interest becomes forfeited.

If a person wishes to dispose of all his property in one gift, the words "all my real and personal estate" may be used.

Personal property left without a Will is devisable as under: If the deceased should leave Children and no Widow, the whole property is to be divided equally among the Children. If he leave a Widow and Child or Children, the former is entitled to one-third, and the latter to the remaining two-thirds. If he leave a Widow and no Child, the former is entitled to half, and the next of Kin the remainder as follows:—A Father, the whole amount; if no Father, a Mother, Brothers, or Sisters, or their issue, equal portions; if none, Uncles, Aunts, Nephews, and Nieces, equal portions.

THE SYDNEY MAIL,

And New South Wales Advertiser:

AN ILLUSTRATED WEEKLY BUDGET

OF LITERATURE, AGRICULTURE, SCIENCE, MINING, SPORTING NEWS, AND GENERAL INFORMATION.

AMPLE PROVISION IS MADE FOR THE FAMILY. There is the LADIES' PAGE, comprising brightly-written comment on subjects of interest to the sex; the latest London and Parisian Fancy Gossip; short and racy essays on social questions; and varied and valuable Household Hints and Information. In the YOUNG FOLKS' PAGE there is always a genial story, a collection of Puzzles, and a column of carefully selected Wit and Humour. FICTION has a prominent place in the *Mail*, the best English and Australian authors being laid under contribution.

In regard to SPORTING, that well-known journal *Bell's Life in Australia* is incorporated with the *Mail*. The services of "Nemo," admittedly the most competent writer on Turf matters in the colonies, are permanently retained. Aquatics, which find so natural a home on the splendid waters of Port Jackson, are carefully chronicled by experts; and Cricket, Football, and the minor sports are copiously reported and impartially commented upon.

PASTORAL and AGRICULTURAL.—These departments being connected with the staple industries of Australia, are regarded as special features of the *Mail*. Current legislation is carefully considered, so that the interest of Graziers and Farmers may be properly conserved; and new inventions calculated to be useful on Farm or Station receive prompt attention. Novel as well as familiar crops form subjects for comment; and, with a view of helping Australia, the progress of other countries is not overlooked.

MINING.—The importance of reliable information from mining districts is fully realised by the proprietors of the *Mail;* and to overcome the effects of sensational rumours, special reports, by competent writers, of new fields, are promptly obtained.

A LEADING HORTICULTURIST each week provides Garden directions, which are eminently practical. The usefulness of the Horticultural Department is acknowledged by thousands of amateur and professional gardeners.

THE ILLUSTRATIONS in the *Sydney Mail* are designed by the best artists in N. S. Wales, and executed by the best available engravers. They represent all current events capable of pictorial treatment, and are a special attraction.

LITERARY MATTERS are especially attended to in the *Sydney Mail*. Original contributions by the best Australian writers are constantly appearing in its columns, and from all sources a plentiful selection of the most curious and interesting extracts is chosen and published in each week's issue.

THE LATEST EUROPEAN AND INTERCOLONIAL TELEGRAMS are given in the *Sydney Mail*.

THE NEWS OF THE WORLD is especially and exhaustively collated for publication in the *Sydney Mail*, which enjoys the advantage of the news-collecting agencies of the most prosperous of colonial newspaper establishments.

Subscription to the Sydney Mail: 6s. 6d. per quarter, 13s. per half-year, or 26s. per annum.
